

PEOPLE POWERED DISASTER RECOVERY

For business-critical IT infrastructures that require on-going disaster and backup recovery services with hands-on support, UbiStor designs and implements customized solutions tailored to your IT environment with a focus on efficient recovery and management.

CLOUD BACKUP

Regardless of the size of your business, regular backups are essential to securing your company's network. No matter your data set, UbiStor has a solution with fully customizable features to suit your needs. Stay ready to restore your data at any moment.

DISASTER RECOVERY

System downtime can jeopardize your company's survival. Specific Recovery Time Objectives and a 24/7/365 support team are requirements for disaster recovery. Ensure your essential data is always secure and accessible with DRaaS from UbiStor.

MICROSOFT 365 BACKUP

Microsoft 365 data is not protected from some of the most common and serious data loss issues. Our easy-to-use and secure cloud-to-cloud backup ensures compliance, quick access to backup Microsoft 365 data, and greatly improved recovery time objectives.

SECURITY & COMPLIANCE

Data will always increase and cyber attacks will continue to become more sophisticated. Finding efficient ways to achieve a state of compliance readiness is now one of the most important things in ensuring your business can recover quickly.

CLOUD HOSTING

Gain the control you need along with available capacity to grow as your business expands. Expand your private cloud compute and storage resources by leveraging flexible pricing structure and a fully customized and configurable multi-cloud solution.

Unload Your Backup and Disaster Recovery Management to Proven Experts

No disaster recovery solution should be standard. Our team of experts not only know the ins-and-outs of backup and disaster recovery as a service, but how they should be applied to your unique IT infrastructure. UbiStor ensures that every customer's demands are met with a timely, personal response that drives improved readiness, prompt recovery and reinforced resilience.

ASSESS | DESIGN | IMPLEMENT | MANAGE

ENVIRONMENTAL ASSESSMENT

Our team will provide an in-depth analysis of the recovery readiness of the environment, reviewing application interdependencies and recovery point and recovery time objectives to assess overall risk.

ANNUAL TESTING

Coordinated by our experts, we will guide your team through an annual testing process to review your recovery methodology and ensure the business is prepared.

RUNBOOK CREATION AND PLANNING

Using the assessment as the guide, UbiStor will work with you to build your disaster recovery plan and runbook to completely document your recovery procedures.

REGULAR DATA MANAGEMENT REVIEWS

On a regular cadence, our team will perform a full review of your backup and recovery environment to ensure there are no gaps in protection and verify that backups are completed successfully.

KEY TECHNOLOGIES

Industry leading technology that is market proven and backed by our team of experts to get you up and running faster:

Acronis

Sets the standard for cyber protection through its innovative backup, anti-ransomware, Microsoft 365 and G-Suite protection, advanced security features, and disaster recovery capabilities.

COMMAVAULT®

Has pioneered numerous industry-shaping innovations and established themselves as the respected leader in information management and disaster recovery.

datto

Uses local virtualization and integrated cloud resources to keep your entire infrastructure instantly ready for recovery.

backupify

Can protect your company's Microsoft 365 and G-Suite data efficiently and offload day-to-day processes management with their easy-to-use web based console.
