

Cloud Backup & Security for the Public Sector and Government Contractors

The cyber threat landscape against the public sector is only growing more complex as a diverse array of attackers seek to steal sensitive data, extort money, or create chaos and heighten distrust in American institutions.

In recent years, state and local governments have suffered a continuous spate of highly publicized cyberattacks against targets as varied as local police departments and court offices to school districts. In fact, close to half of the cyber-espionage breaches examined over the past three years were reported in the public sector.

It comes as no surprise, then, that many are suffering the consequences. The average cost of a data breach for a US public sector organization is a staggering \$2.3 million. But costs come in more than just dollars and cents. With sensitive data and operations at stake, organizations also risk losses in productivity and public trust. The US public sector should rest easy, though – there is a better way.

UbiStor and Acronis SCS understand the unique challenges IT departments in the public sector face.

- ❶ Limited IT budgets and staff
- ❷ Changing security and threat landscape
- ❸ Evolving compliance requirements
- ❹ Lack of incident response experience

About SafeStor SCS

SafeStor SCS, powered by Acronis SCS and UbiStor, is transforming the way the US public sector stays protected. Acronis SCS's certified cloud backup and security platform empowers public sector customers with a wide range of features, including backup, ransomware protection, and recovery – all managed from a centralized console. Adding UbiStor's decades of disaster recovery experience, you can have the confidence that expert engineers protect your data and systems in a cloud environment specifically designed for your compliance requirements.

UbiStor's Safestor SCS Advantages

- ✓ 24/7 US Based Support and Incident Response
- ✓ Protective Ransomware Protection and Advanced Security Features
- ✓ Secure Compliant Data Centers and Offsite Storage
 - CIJS - compliant
 - FIPS 140-2 - validated
 - NIST 800-171 – compliant
 - HIPAA - compliant

THE UBISTOR DIFFERENCE

In today's business landscape, public sector organizations and government contractors must respond quickly to cyberattacks, natural disasters, employee errors, and hardware failure. Outsourcing the management of your backup and recovery strategy to a Managed Service Provider like UbiStor can save your business countless hours and protect you from financial loss – allowing you to focus on your critical technology objectives. Since 2001, UbiStor has been developing bulletproof backup and disaster recovery strategies using a consultative approach and proven methodology to protect your data and organization.
