

**Every 11 seconds**  
 a company is hit with ransomware  
 and more than **90%** of small and  
 mid-sized companies reported that  
 a cyber attack had a severe impact  
 to their business

Businesses are reducing their overall costs and ensuring they have the resources available to handle an event by leaning on experts dedicated to the overall data protection and recovery strategy, instead of taking on this burden themselves

### ARE YOU FULLY PREPARED?

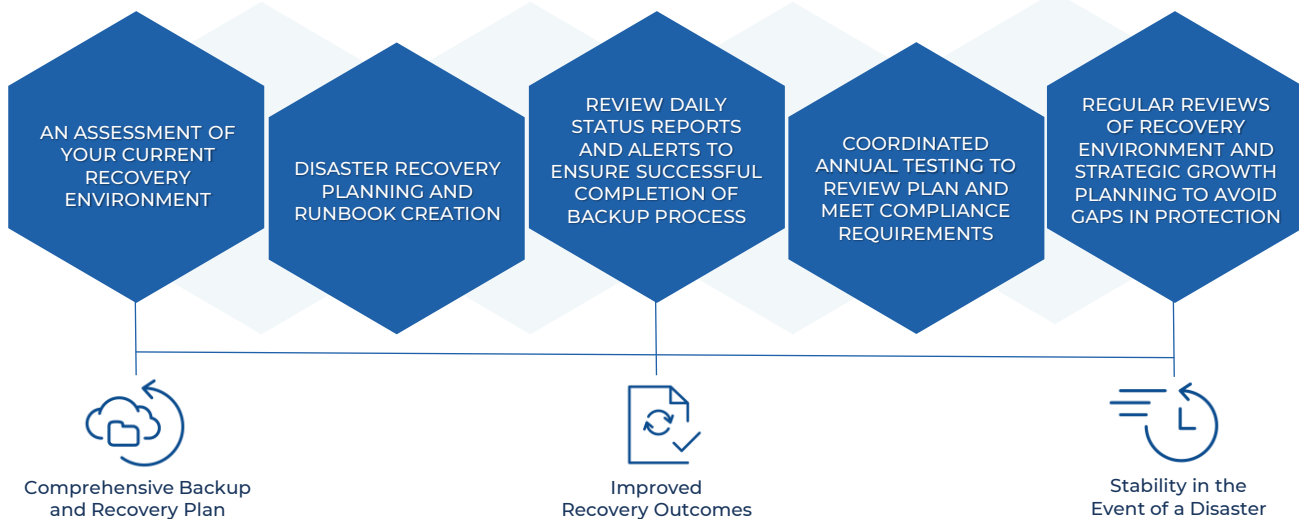

Most businesses think they are protected, but consistently that is not the case. The threat landscape is rapidly evolving, and IT teams cannot keep up.

The question now is not "if" you will be infected, but "when?" If your business succumbs to a ransomware event, malicious data deletion, or other catastrophic event, do you have a fully documented and regularly tested recovery plan to fall back on?

### CURRENT BUSINESS CHALLENGES

- Staff expertise to consistently manage and maintain recovery environment
- Lack of documentation and testing of recovery plan and processes
- 24/7 resources to manage to recovery when an incident occurs
- Cyber insurance requirements and increasing premiums

### WORKING WITH AN EXPERT DISASTER RECOVERY SERVICE PROVIDER, YOU CAN EXPECT

### OUR EXPERT CONSULTATION INCLUDES

- An assessment of your pain points and areas of vulnerability
- A review of your current protection methodology and testing procedures
- A game plan for your data security strategy, tailored to your business's needs
